

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**LISTING OF CLAIMS:**

---

Claim 1 (Currently Amended): A method for at least partly automated bookkeeping, comprising:

providing a server with a banking service application and an account service application, said server being accessible to at least one client through ~~an~~ a wide area network ~~such as the Internet~~, wherein said account service application is connected to a book-keeping database,

 receiving, ~~to~~ at said server, data representing instructions for at least one transaction,

using said data in the banking service application for conducting the transaction, using at least part of said data as accounting information in the account service application for updating said book-keeping database.

Claim 2 (Original): A method according to claim 1, wherein the transaction is a payment instruction.

Claim 3 (Previously Presented): A method according to claim 1, wherein the received data further comprises account data connected to the transaction instruction data.

Claim 4 (Original): A method according to claim 3, wherein the account data comprises account identification.

Claim 5 (Original): A method according to claim 3, wherein the account data comprises information of value-added tax related to the transaction.

B3A  
Claim 6 (Currently Amended): A method according to claim 1, comprising the further step of transmitting a network accessible document, ~~such as a hypertext document~~, in response to a request transmitted by the client to said server, said document comprising entering fields for ~~fomalised~~ formalized input of information of a user on the client side.

Claim 7 (Previously Presented): A method according to claim 1, further comprising searching the book-keeping database for previously entered account data items similar to the received data regarding at least one predetermined parameter, and if such similar accounting data items are found, suggest additional accounting data to be stored in the book-keeping database in connection with the newly received accounting information in accordance with information in the found accounting data items.

Claim 8 (Original): A method according to claim 7, wherein the predetermined parameter is the identity of the payment receiver.

Claim 9 (Currently Amended): A system for at least partly automated book-keeping, comprising:

a server, said server comprising a banking service application and an account service application, wherein the server is accessible to at least one client through an wide area network ~~such as the Internet~~,

a book-keeping database connected to said account service application,

wherein said server is adapted to use data representing instructions for at least one transaction received through said network from said client in the banking service application for conducting the transaction, and further to use at least part of said data as accounting information in the account service application for updating said book-keeping database.

Claim 10 (Previously Presented): A method according to claim 2, wherein the received data further comprises account data connected to the transaction instruction data.

Claim 11 (Previously Presented): A method according to claim 10, wherein the account data comprises account information.

Claim 12 (Previously Presented): A method according to claim 10, wherein the account data comprises information of value-added tax related to the transaction.

Claim 13 (Currently Amended): A method according to claim 2, comprising the further step of transmitting a network accessible document, ~~such as a hypertext document~~, in response to a request transmitted by the client and said server, said document comprising entering fields for ~~formalised~~ formalized input of information of a user on the client side.

B3  
Claim 14 (Currently Amended): A method according to claim 3, comprising the further step of transmitting a network accessible document, ~~such as a hypertext document~~, in response to a request transmitted by the client and said server, said document comprising entering fields for ~~formalised~~ formalized input of information of a user on the client side.

Claim 15 (Currently Amended): A method according to claim 10, comprising the further step of transmitting a network accessible document, ~~such as a hypertext document~~, in response to a request transmitted by the client and said server, said document comprising entering fields for ~~formalised~~ formalized input of information of a user on the client side.

Claim 16 (Currentlty Amended): A method according to claim 4, comprising the further step of transmitting a network accessible document, ~~such as a hypertext document~~, in response to a request transmitted by the client and said server, said document comprising entering fields for ~~formalised~~ formalized input of information of a user on the client side.

Claim 17 (Previously Presented): A method according to claim 2, further comprising searching the book-keeping database for previously entered accounting data items similar to

the received data regarding at least one predetermined parameter, and if such similar accounting data items are found, suggest additional accounting data to be stored in the book-keeping database in connection with the newly received accounting information in accordance with information in the found accounting data items.

 Claim 18 (Previously Presented): A method according to claim 3, further comprising searching the book-keeping database for previously entered accounting data items similar to the received data regarding at least one predetermined parameter, and if such similar accounting data items are found, suggest additional accounting data to be stored in the book-keeping database in connection with the newly received accounting information in accordance with information in the found accounting data items.

Claim 19 (Previously Presented): A method according to claim 10, further comprising searching the book-keeping database for previously entered accounting data items similar to the received data regarding at least one predetermined parameter, and if such similar accounting data items are found, suggest additional accounting data to be stored in the book-keeping database in connection with the newly received accounting information in accordance with information in the found accounting data items.

Claim 20 (Previously Presented): A method according to claim 2, further comprising searching the book-keeping database for previously entered accounting data items similar to the received data regarding at least one predetermined parameter, and if such similar

B<sup>3</sup> accounting data items are found, suggest additional accounting data to be stored in the book-keeping database in connection with the newly received accounting information in accordance with information in the found accounting data items.
